Opticodec-PC 1010PE software uses the MPEG-4 AAC/aacPlus codec to produce. Omnia HD.. but includes no serial or crack code. Opticodec-PC is an all-in-one, high-performance HD radio tuner and radio P.M.E.A.C.T. or Personal Message Encoder. Opticodec-PC 1020PC software uses the MPEG-4 AAC/aacPlus codec to produce. Omnia HD. do not have serial or crack software. If Opticodec-PC.This invention relates to methods for measuring the magnitude and direction of earth displacement and, more particularly, to an improved apparatus and method for measuring soil displacement beneath a variety of earth support structures. A variety of support structures are used to stabilize earth masses or foundations and to protect manmade structures against natural disasters. For example, slabs, walls, roofs and bridges have all been used to support structures such as buildings, bridges, dams, swimming pools and other permanent and semi-permanent facilities. Land surveying techniques have for years been used to determine the shape and dimensions of such soil supports. By way of example, the specification British Standard BS3434-1-1979, entitled "Basic Determination of Slope Dimensions for Building Services", which is hereby incorporated by reference for all purposes, establishes criteria for the determination of the basic dimensions and direction of earth displacement, and defines basic units of measurement. Further, a variety of techniques have been used to determine the magnitude and direction of earth displacement. For example, devices which use one or more energy sources such as radio waves, lasers, electromagnetic waves, seismic waves or acoustic waves have been used to measure either horizontal or vertical displacement of the earth mass. Examples of such systems are found in U.S. Pat. Nos. 3,828,367 and 4,441,629. Other techniques include the use of horizontal springs which physically deform the earth mass and measure the elastic deflection of the earth mass in order to determine the magnitude of the earth displacement. Examples of this technique are found in U.S. Pat. Nos. 3,534,381, 3,699,871, 3,784,496 and 4,608,955. Still other techniques include the use of magnetic or electro-magnetic force field sensors, such as superconducting quantum interference devices (SQUIDs). Examples of this technique are found in U.S
